1. Summary

The purpose of this specifications document is to provide both the reporting entities and reporting persons with the requirements and conditions for creating compatible XML files using the provided XML-Schema for the different supported report types.

A report file contains the following information which can be represented in the goAML Client after uploading and verifying the XML file.

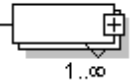

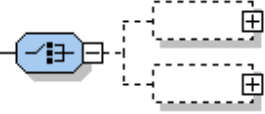

- Basic information about the report.
- Where does the money come from.
- Who conducted the transaction.
- Where does the money go to.
- Was the transaction related to a property transfer
- Who reported the transaction(s) (Optional)
- What was the reason for the report and which actions have been taken (Optional)
- In multi-party transactions, list of all involved parties and their respective roles in the transactions.

An XML report is linked to one Reporting Entity but may contain multiple transactions. An uploaded report can be from ONE report type.

This document will provide a reference to the schema, nodes and types as well as the lookup tables for enumeration values. (e.g. Country Codes)
